# 1¼" Fixed Shutter Plan

**Project Name:** 125-fixed-60-30

**Shutter Description:** i.e. West Window

Thank you for using Rockler's Shutter Design Wizard. Please review the following information before building your shutters. The Shutter Design Wizard allows you to save plans individually, email them to yourself or your builder, or print them out for use in your shop. Plus, you can reset the Shutter Design Wizard to configure additional shutter panel sizes as needed for your entire project.

## Important Notes:

- Consult the Shutter Measuring and Mounting Guide to determine accurate shutter panel dimensions.
- The program assumes 5/4 stock (1$\frac{1}{16}$" finished thickness) for all frame pieces (stiles and rails). Minimum thickness for all Shutter Stile Jigs is 1".
- The program uses preset values for the stile and rail widths. Stiles are a standard 1½" wide. Top and bottom rails adjust according to panel height.
- Plan defaults to dowels for the frame joinery. If using mortise and tenon joinery for the frame, add tenon length to the rails.
- For shutters over 48" in height, a middle rail is recommended. See the Shutter Measuring and Mounting Guide for details.
- Fixed louvers attach to mortises cut in the stiles. Do not glue louvers.
- Shutter plan does not include additional stile width required for the overlap between adjoining shutters. Consult the Shutter Measuring and Mounting Guide for more information on multiple shutter configurations.
